

DUST EXTRACTION KITS

Hazardous dust should always be removed at source.

Our on-tool dust extraction kits efficiently remove the dust from grinding, sanding and cutting operations.

High Vacuum Systems

DUST EXTRACTION KITS FOR GRINDERS

Two different kit designs are available

This kit consists of two main parts, an extraction nozzle and a tool adapter. The unique design allows the nozzle to efficiently remove the dust without interfering with the work.

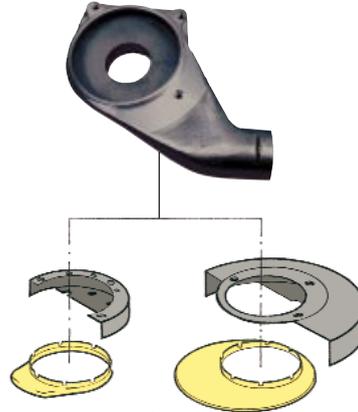

The adapter can hold the nozzle in two positions to match $\text{Ø}180\text{mm}$ (7") or $\text{Ø}230\text{ mm}$ (9") grinding wheels.

Extraction nozzle fitted to a modern heavy metal grinder.

This kit consists of three main parts, an aluminium manifold, a wheel guard and a snap-in plastic hood. There are a large number of manifolds machined to fit different tool makes and models.

The wheel guard and the snap-in hood are available for $\text{Ø}125\text{ mm}$ (5") and $\text{Ø}180\text{ mm}$ (7") grinding wheels.

125 mm kit (5") fitted to medium size grinder.

Tool in operation. Fine particles are efficiently captured. No "smell of grinding" any more. Heavy particles, not hazardous to your health, are hard to capture.

180 mm kit (7") fitted to heavy metal grinder. Turning the snap-in hood compensates for a decreasing grinding disc diameter.
